## 11 Technical Data

|  | BDS3000 |
| :---: | :---: |
| Measuring element | Piezoresistive sensor |
| Measuring ranges | 0... 35 bar differential pressure |
| Display | 4-digit 14-segment LED display, red, digit height 9 mm Displays differential pressure between Port 1 and Port 2 |
| Transistor switching outputs PNP (IO-Link version with PNO, NPN, PP) | 1 or $2 \times \mathrm{NO} / \mathrm{NC}$ function (programmable), adjustable switching time delay $0 \ldots 50 \mathrm{~s}$ |
| Operating temperature range | $-10 \ldots+70^{\circ} \mathrm{C} /+14 \ldots+158^{\circ} \mathrm{F}$ |
| Media temperature range | $-25 \ldots+100^{\circ} \mathrm{C} /-13 \ldots+212^{\circ} \mathrm{F}$ |
| Storage temperature range | $-30 \ldots+80^{\circ} \mathrm{C} /-22 \ldots+176{ }^{\circ} \mathrm{F}$ |
| Process connection | G1/4", 1/4" NPT |
| Protection system ${ }^{11} /$ class | IP65, IP67; / III |
| Electrical connection | M 12x1, 4/5/-pin (depending on output code) |
| Power supply | 15... 32 V DC |
| For further technical data and options please refer to the data sheets |  |

1) The stated ingress protection only applies when plugged in using mating connectors that have the appropriate
ingress protection.

## 1 Intended Applications

The dual pressure switch monitors system differential pressure and has up to two switching outputs and one analog output.

## 1 DANGER

The switch may only be used in the specified fields of application.
The temperature ranges must be within the permissible limits. Do not exceed rated pressure and electrical load values
Observe also the applicable national and local safety instructions for assembly, commissioning and operation of the switch

The switch is not designed to be used as the only safety device in pressurized systems according to "Pressure Equipment Directive 97/23/EC (PED)".

## 2 Safety Instructions

The safety instructions are intended to protect the user from dangerous situations and/or prevent material damage
In the operating instructions the seriousness of the potential risk is designated by the following signal words:

|  | DANGER |
| :--- | :--- |
| Refers to imminent danger to users. |  |
| Nonobservance may result in fatal injuries. |  |

## WARNING

Refers to a recognizable danger.
Nonobservance may result in fatal injuries, and destroy the equipment or plant parts

## CAUTION

Refers to a danger.
Nonobservance may result in light injuries and material damage to the switch and/or to the plant.

```
0, ($)
IMPORTANT
Refers to important information essential to the user
```

## Disposal

The switch must be disposed of correctly in accordance with the national or local regulations for electric/electronic equipment.
The switch must not be disposed of with the household trash!

## 3 Standards

The standards applied during development, manufacture and configuration are listed in the CE conformity and manufacturer's declaration.

## 4 Warranty/Guarantee

Our scope of delivery and services is governed by the legal warranties and warranty periods. Terms of guarantee
We guaranty for function and material of the dual pressure switch under normal operating and maintenance conditions in accordance with the statutory provisions

## Loss of guarantee

The agreed guarantee period will expire in case of:

- incorrect use,
- incorrect installation or
- incorrect handling or operation contrary to the provisions of these operating instructions.

No liability is assumed for any damage resulting therefrom, or any consequential damage.

See also Barksdale "Standard Terms and Conditions"

## 5 Installation

| L. | CAUTION |
| :--- | :--- |
| Jolts and heavy vibrations must be avoided during transport. Even if the switch casing remains |  | undamaged, inside parts may be damaged and cause malfunctions.

The pressure switch may only be installed and electrically connected by instructed staff.

| DANGER |
| :--- |
| The switch may only be installed in systems where the maximum pressure $P_{\max }$ is not exceeded |
| (see type label). |
| Only install the switch when deenergized (electrically and hydraulically/pneumatically). |
| Ensure that the high side of the pressure is installed with respect to the high pressure port. |
| Incorrect installation could result in damage to the sensor, equipment, and potential injury. High |
| pressure on low pressure port will result in damage to the sensor. |

Install the pressure switch to each fitting using a wrench 22 mm or $7 / 8$

Electrical connection is to be carried out dependent on the type of switch (see name label) according o the chart below. Improper connections may cause malfunctions or incorrect switch outputs and damage to the unit.

## Electrical connection

| Plug M 12x1 <br> 4/5/-pin | Model with 2 switch <br> point | Model with 1 switch point <br> and 1 analog output | Model with 2 switch point and <br> 1 analog output |
| :---: | :---: | :---: | :---: |

| $\mathbf{5}$ | SP1 / IO link' | SP1 | SP1 / IO link' |

only code 7 and 8

## Plug

## 6 Commissioning/Operation

The pressure switch may only be commissioned and operated by authorized staff.

## 1. CAUTION

Do not put the switch into operation when the switch itself or the connection cable is damaged.

## ! WARNING

Be aware of the fact that in case of operation with higher temperatures the casing surface may become very hot!

Apply high pressure first, followed by the low reference pressure

After having been switched on the switch runs through a self-test. If the software recognizes an rror during the self-test or during operation, this is signaled in the display by "Err" and the corresponding message, refer to Error list on page 7. The red LEDs S1 and S2 signal the activity of the two switching points.

$$
\text { Operation is menu-driven via three keys: } A, \nabla \text { and } M
$$

## ! CAUTION

Do not use any pointed, hard objects for making entries. The keys may be damaged by pointed, hard objects.

## 7 IO-link version

## General information

This device features an IO-link communication interface which requires an IO-link capable module (IO-link master) for operation. The IO-link interface permits direct access to process and diagnostic data and offers the possibility of parametrising the device during operation. Moreover communication via a point-to-point connection using a USB adapter cable is possible.
Device-specific information
The IODDs required for the configuration of the IO-link device and detailed information about process structure, diagnostic information and parameter addresses are available at ->IODD finder and on https://www.barksdale.de/de/download/iolink/. To find the required information please enter the order code in the search mask. IO-link devices manufactured before 04-01-2019 do not support different polarities of the switching outputs.
NOTE: Since process connection, seal and measuring cell have no influence on the IO-link communication you must replace them by "xx". E.g. BDS375VM0010BP = BDS37xxM0010Bx TIP: Use the autocomplete function of the IODD finder by entering the article no. character by character. If your device has been manufactured before 04-01-2019 please take into account that the proposed device ID begins with 0x070.

## 8 Programming

| Navigation function | Symbol (keys) |
| :--- | :--- |
| Menu descending | V |
| Menu ascending | $\mathbf{}$ |
| Horizontal movement in menu, select menu item | M |
| Parameter change ascending | $\mathbf{}$ |
| Parameter change descending | M |
| Accept parameter change and return to current menu item | Press |
| Return to measured value display | simultaneously |

8．1 Parameters

| Parameter | 14－segment display | Description |
| :---: | :---: | :---: |
| SP1／SP2 ${ }^{1}$ |  | Hysteresis function：switching point of solid state contact |
| FH1／FH2 ${ }^{1}$ | FH1，EHC | Window function：Window High solid state contact |
| rP1／rP2 ${ }^{1}$ | \％Rリ，rFe | Hysteresis function：hysteresis of solid state contact |
| FL1／FL2 ${ }^{1}$ | EET，EEC | Window function：Window Low solid state contact |
| EF | EF | Extended programming functions |
| rES | \％ 0 里 | Reset parameters to factory settings |
| dS1／dS2 ${ }^{1}$ | －61，¢5a | Switching time delay－the set contact rating must be permanently exceeded to trigger a switching function |
| $\mathrm{dr1} 1 / \mathrm{dr2}{ }^{1}$ | \＃cy，dre | Switching time delay－the contact rating must be permanently lower than the set contact rating to trigger a switching function |
| Ou1／Ou2 ${ }^{1}$ | ロロア，ロー『 | Switching function of solid state contact <br> Hno＝hysteresis function，NO contact <br> HNC＝hysteresis function，NC contact <br> FNO＝window function，NO contact <br> FNC＝window function，NC contact <br> DIA＝diagnostic function，NO contact（only Ou2） |
| $\begin{aligned} & \text { Pol } 1 / \\ & \text { Pol } 2^{3} \end{aligned}$ |  | Select polarity of switching output：PP，NPN，PNP |
| uni | いロッ | Select unit：bar，PSI，MPa <br> If the measuring range is outside the display range，unit selection is impossible．The parameter＂uni＂is not displayed． |
| OuA ${ }^{2}$ | 日6r | $\begin{array}{ll} \text { Analog output } \\ \begin{array}{ll} \text { A } & =4 \ldots 20 \mathrm{~mA} \\ \mathrm{U} & =0 \ldots 10 \mathrm{~V} \\ \text { I.INV } & =20 \ldots 4 \mathrm{~mA} \\ \text { U.INV } & =10 \ldots \mathrm{~V} \end{array} \end{array}$ |
| $\mathrm{ASP}^{2}$ | \％60 | Analog start value |

| Parameter | 14－segment display | Description |
| :---: | :---: | :---: |
| AEP ${ }^{2}$ | 日E日 | Analog end value |
| $\mathrm{dPA}{ }^{2}$ | cran | Damping of analog output |
| ErS．A ${ }^{2}$ | Er岛 | Error signal of analog output Values：＜ 3.6 or＞ 22 or Off |
| Hi | （8） $8_{1}$ | Saved value of highest pressure measured |
| Lo | 88 Ba | Saved value of lowest pressure measured |
| COF | LOF | Offset correction（max． $10 \%$ of measuring range） |
| ddis | 世075 | Damping display |
| Fdis | F－6T5 | Rotate display through $180^{\circ}$ |
| udis | －6T5 | Unit indication |
| Firm | FTrm | Firmware version |
| Lock | Leref | Software lock |

${ }^{1}$ only models with 2nd switching contact
${ }^{2}$ only models with analog output
${ }^{3}$ only IO－link devices

Error list

| Parameter | 14－segment display | Description |
| :--- | :--- | :--- |
| sens |  | Sensor defect |
| SC1 | Short circuit，solid state contact 1 |  |
| SC2 | Short circuit，solid state contact 2 |  |
| AOut | Open output，short circuit |  |
| OL | Sensor limit positive |  |
| UL | Sensor limit negative |  |
| KEY | Internal defect |  |

' only models with $2 n$ s switching contact
${ }^{2}$ only models with analog output
(ASP $=0.0 \%-80.0 \%$ range, $\operatorname{AEP}=20,0 \%-100 \%$ range; ASP $=$ AEP $-20, \%$ range $)$
${ }^{3}$ setting according to measuring range
${ }^{4}$ only IO-link devices

## 9 Maintenance/Cleaning

## Maintenance

The pressure switch requires no maintenance.

| $\Lambda \mathrm{S}$ | WARNING |
| :--- | :--- |
| Check the switch for functioning at regular intervals. |  |
| If the switch does not work properly, stop operation immediately. |  |

## Cleaning

## 4. CAUTION

The switch may be damaged by the use of unsuitable cleaning agents.
The following cleaning agents may be used to clean polycarbonates:

- Mild soap or detergents
- Isopropyl alcohol

After cleaning, immediately rinse with water. Do not leave cleaners on surfaces of products.
Do not clean products at elevated temperatures or under direct sunlight.
The following cleaning agents are known to affect the integrity of polycarbonate components and should not be used:

- ZEP Fast 505, Pinesol, Formula 409

Brake Cleaner

- Halogenated solvents (benzene, gasoline, acetone or carbon tetrachloride)

Strong alkaline

- MEK (methyl ethyl ketone)
- Abrasive substances

## 10 Decommissioning

## $\triangle$ dancer

## Only remove the switch when deenergized (electrically and hydraulically/pneumatically)

Reduce the low pressure first, followed by the high pressure.
Disconnection of the switch from pressure and power supply must be carried out by trained or instructed personnel according to state-of-the-art standards.

## WARNING

Be aware of the fact that in case of operation with higher temperatures the casing surface may become very hot!
